

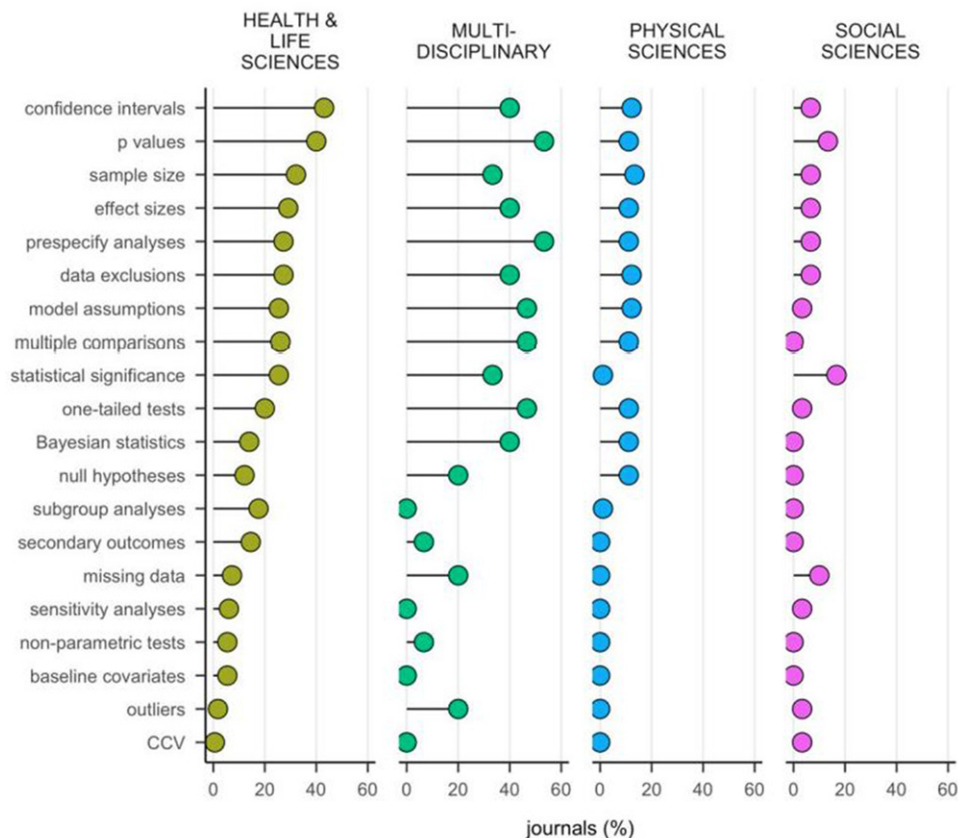

Figure 2. Frequency of journals offering guidance on 20 prespecified statistical topics. Data is stratified by scientific domain (Health & Life Sciences: $n = 165$ journals; Multidisciplinary: $n = 15$; Social Sciences: $n = 30$; Physical Sciences: $n = 90$); the Formal Sciences are not shown because no journals provided statistical guidance. Data is presented in descending order of overall frequency across all domains. CCV = categorizing continuous variables.
